METRIC NAME	Quality audits on environment and energy are regularly undertaken by the institution

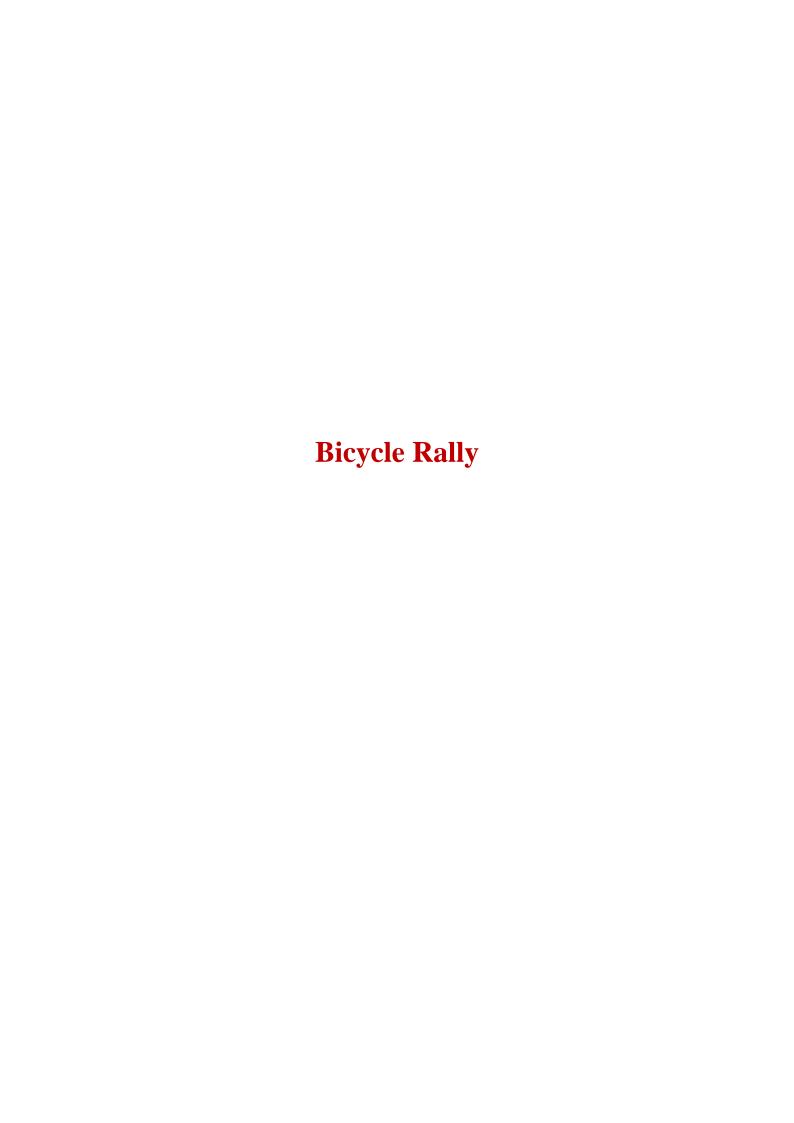

Quality audits on environment and energy are regularly undertaken by the institution Green Audit

Executive Summary

The activities pursued by colleges can create a variety of positive environmental impacts. Colleges are also in a unique position as educational institutions to be leaders in pursuing environmentally sustainable solutions. Green Audit is linked to Sustainable development process. Through Green Audit, one gets a direction as how to improve the condition of environment and there are various factors that have determined the progress of Green Audit process. The green audit practically involves energy conservation, use of renewable sources energy audit, rain water harvesting, hazardous waste management. It is necessary to conduct green audit in college campus because students have to be aware of the green audit, its advantages to save the planet and thereby get motivated to become good citizens of the country.

Audit and sustainable development process help to reduce wastage and associated cost as well as increase the product quality. As environmental sustainability is becoming an increasingly important issue for the nation, the role of higher educational institutions in relation to environmental sustainability is more relevant. Green audit can be a useful tool for a college to determine how and where they are using most of energy, water or other resources; the college can then consider how to implement changes and make savings. It can also be used to determine the type and volume of waste, to improve waste minimization plan. Green auditing can also create health consciousness and promote environmental awareness, values and ethics. It provides staff and students better understanding of the impact of green methods on campus. It gives an opportunity for the development of ownership, personal and social responsibility for the students and teachers. Mahatma Gandhi College, Armori, District Gadchiroli has conducted a energy auditing during the period of 2021-2022 in the campus. The College undertakes various green initiatives relating to environment consciousness in the college campus. The institute takes all possible steps to make the campus eco-friendly. The use of plastic bags is avoided in the campus and in the villages planned to declare the entire campus as "No Plastic Zone". Under the NSS programmes the students and staff have planted many tree saplings during various tree plantation programmes in and around adopted villages of Armori organized by the College and all these trees are taken care of and maintained by the College.

Environmental Sustainability, Conservation by Student's Participation with local village peoples in Waghala village near Armori

Environmental Sustainability, Conservation by Student's Participation with local *Waghala* village peoples.

Environmental education and education for the environment today play an important role in sustainability. Environmental education provided by our institute has an important impact on preparing the next generation for a green society.

Students from the departments of Zoology, Botany, Chemistry, Geology, and Physics visited Waghala village for study of various environmental issues and interact with peoples. The conservation of the environment necessitates an effort to study various environmental factors, take them into account, and increase the knowledge of students and village peoples. This activity is done at Waghala village (beyond the campus) to make people aware of the environment.

To collect data to measure students' environmental education, perception, interaction with people and awareness of their attitudes and behaviour. In this study, it was revealed that students receiving academic education are involved in activities regarding environmental protection by studying the plant diversity, animal and bird diversity, soil, and potable water, making people aware of these environmental factors for sustainability. Students of various subjects participated in these environmental promotional activities.

As a result, there is environmental education and awareness, conservation, and sustainability developed among the students and village people.

Department of Botany (2021-22)

Identify the plant diversity of Waghala village and enlisting and documentation of vegetation. Floristic diversity in the Waghala has been accumulated based on the vegetation survey and take help of local people and aware them about importance of flora.

Department of Chemistry (2021-22)

Department of Chemistry carried out survey and analysis on water and soil sample of Waghala village by using questionnaire and analysis of entire sample of water was completed in M.G Arts, Science and late N.P Commerce college Armori chemistry laboratory and soil samples were analyzed in the district laboratory of soil Testing and Survey office Gadchiroli. Different parameter of water like chloride, Hardness, PH, TDS, and Fluoride was studied and compared with standard (IS10500) Excellent Acceptable range. Parameters of soil like PH, dissolved salt in soil water, amount carbon, phosphorous, potassium, nitrogen, calcium and magnesium were also studied and compared with standard value. From the result of investigation, we recommended some key advice to that corresponding village which will be beneficial to village farmer.

Department of Zoology (2021-22)

Waghala is considered to be one of the biodiversity rich areas of storks in Gadchiroli district. It possesses great diversity of flora and fauna. In the present observation, birds were identified and recorded for community structure and diversity. It is observed that there is a lot of bird's species which are founds in river zone and bank. This entire stork they excrete their excreta in the waste of birds there is presence of nitrogenous waste act as bio fertilizer and it

helps in increasing the yield which is very effective for farming. This fecal matter does not affect by any means to villagers. Peoples of the village on the contrary protecting these guests every year and conserve the site which is example of awareness. Pollution, pesticide and wetland drainage have severely reduced suitable foraging habitat across the breeding range. Conservation efforts that focus on the preservation of ecosystems and biodiversity seems to hold the most promise for halting the decline of this and other bird's species.

Department of Geology (2021-22)

A Study of Shallow Water Aquifer and Geology in Waghala Village of Armori Taluka, Dist. Gadchiroli. The Waghala village is a settlement along the river bank of the Wainganga River. Accordingly, most of the sedimentary strata is of quaternary age and brought by the series of floods of Wainganga River. The shallow water aquifer is mostly composed of the sedimentary beds including alluvium and gravel beds and a hard rock probably of sandstone. As the alluvium and gravel beds are of high porosity and permeability, the shallow aquifer is of great potential. The Wainganga River towards west is the major recharger of this shallow aquifer. Majority of the groundwater resource is mostly exploited through bore well followed by dug wells. The dug wells are also in use for the domestic purpose and the water quality is of no concern. Hence, suggestible for domestic and drinking purpose (in absence of alternating source). As the Waghala village is a paddy field, the groundwater resources are also widely used for the agricultural purpose.

Department of Physics (2021-22)

Use of Electrical Appliances in Household at *Waghala* Village of Armori tehsil dist. Gadchiroli (M.S.). In this era where electricity and electrical appliances are very important for the survival of human being and government putting its efforts to make every household electrified, as a result all the households are electrified in village *Waghala*. Moreover, since 30% of electricity in household is use for lighting purpose, modern lighting technologies are being adopted. It is found that only 17 % household are using conventional lighting sources (Incandescent bulbs) and 68 % are using CFL resulting into more consumption of electricity.

Very few other electrical appliances are being used in household and some of these are made up of old technologies. In some household, inappropriate earthlings are found.
